INDEX.

Abbeville, flint implements found at, 291.
Absorption of light, example of, 161.
Absorption of light, a misnomer, 16.
Achatina acicula, the agate shell, 326.
Achromatic condenser, use of, 277.
Actiniæ found at Southend, 182.
Actinism a force of light, 57.
Actinism, philosophy of, 18.
Actinophrys, multiplication of, 184.
Agamogenesis, nature of, 66.
Age of stone, flint implements, 289.
Alarum, telegraphic, 282.
Alexis St. Martin, experiments on, 300.
Algæ, marine, notes on, 169.
Alligators of Demerara, 299.
Allotropism, examples of, 242.
Alosa communis, the shad, 273.
Amœbas, how to find in ponds, 138.
Amateur astronomers, encouragement for, 32.
Ammonites found in greensand, 199.
Amorphous bodies, 244.
Anagallis a microscopical study, 100.
Analysis by means of light, 294.
Analyzer for polarized light, 166.
Ancient earth, a vision of, 60.
Ancient and modern hydræ, 3.
Ancyloceras grandis in greensand, 199.
Anecdotes of geologists, 186.
Anguillala pierced by hydra viridis, 54.
Animal life, chemistry of, 303.
Animals imitated in chipped flints, 293.
Animals, where do they die? 25.
Annelids from the deep sea, 102.
Anodonta cygnea, a fresh-water mussel, 287.
Antennularia plentiful in the pools, 180.
Anthropoid apes, 106.
Antiquity of certain truths in science, 1.
Ants prey upon aphides, 65.
"Ants' cows," aphis so called, 66.
Aphides, microscopic observation of, 65.
Aphis rosæ described, 65.
Aphrodita aculeatus found at Southend, 182.
Apparatus for desiccating milk, 94.
Apparatus for gold coinage described, 237.
Apparent diameter of sun considered, 115.
Apple, section of wood of, 209.
Apterous state of aphides, 66.
Aquaria: Hydra viridis and Hydra fusca, 3, 52; Vallisneria spiralis, history of, 9; Melicerta ringens, 45; lace-leaf plant, 60; physiology of Dytiscus marginalis, 83; minute life of the sea, 127; sea-weeds, 169; Rotatoria, 172; dredging at Southend, 180; marvels of pond life, 276; British fresh-water shells, 285, 321.
Aquaria, chemistry of, 56.
Arachnoidiscus figured, 247.
Arch, auroral, of March 9, 1861, 63.
Argand-burner, how constructed, 41.
Artificial crystals, Crosse's, 241.
Artificial ice, crystals of, 319.
Artificial light in photography, 40.
Artificial tourmalines, use of, 166.
Astronomical Observations: 1861—April, 31; May, 64; June, 99; July, 137; August, 171; September, 208; October, 245; November, 281; December, 316. 1862—January, 349.
Astronomical discoveries of M. Goldschmidt, 32.
Astronomy: planets, lists of new, 66, 284, 606; encouragement for amateurs, 32; apparent diameter of sun and moon at horizon considered, 110, 284, 320; Burder's comet, history of, 141; lunar theory of the weather, 283; solar eclipse of December 31, 1861, 317; transit of Mercury of November 12, 1861, 281.
Athermanous bodies, action of, 18.
Atlantic telegraph, soundings for, 103.
Atmosphere a prism, 15.
Atmospherical refraction, effects of, 113.
Atomic constitution of bodies, 244.
Atomic constitution of crystals, 173.
Aurora Borealis of March 9, 1861, 63.
Aurora of March 9, 1861, 104.

Bacillaria paradoxa, movements of, 183.
Balance of forces in aquaria, 11.
Balea fragilis, the moss shell, 325.
Balloon telegraphy, 176.
Bank of England, relations to the Mint, 235.
Barometer, petroleum, 302.
Battery, galvanic, to construct, 21.
Battery, Ruhmkorff's coil, 202.
Beam of light interrupted, 159.
Bees and wasps not antagonistic, 73.
Bees and wasps, are they antagonistic, 212.
Beeston, molluscs found at, 286.
Beetle, notes on Dytiscus marginalis, 83.
Benzoin, crystals of, for microscope, 174.
Berkeley, opinion of, on refraction, 113.
Biblical doctrines of the origin of life, 234.
Biddulphia Baileyii, frustules of, 184.
Binocular microscope, Wenham's, 208.
Birds, pleasure of training and teaching, 81.
Bistort, flowers of, 48.
Bithinia tentaculata, figured, 288.
Blank gold coins described, 241.
Blackbirds and lapwings, 104.
Blackdown, Berks, geology of, 200.
Blood, pressure of, in arterial column, 93.
Blood, how sustained in volume and quality, 310.
Blue dyes, how obtained, 314.
Boadicea, supposed coins of, 156.
Boiling points of different liquids, 140.
Books received: Du Chaillu's Explorations, 105; Darwin on Species, 219; Marvels of Pond Life, 276.
Botany: Vallisneria spiralis, 9; hymenophyllums, 31; plants common on chalk, 35; lace-leaf plant, Ouvirandra fenestralis, 60; microscopic study of the Anagallis, 100; cellular structure of the garden pea, 133; sea-weeds, 169; wine-palm, 177; cotton-trees of Jamaica, 193; vegetable anatomy, 209; fungi of the past autumn, 318; Wayside Weeds and their Teachings, handful V., 47, 88; handful VI., 268, 296; handful VII., 334.
Brain of gorilla, bulk of, 108.
Breathing vessels of Dytiscus marginalis, 85.
Breiddan mountains, geology of, 191.
Britain, geological map of, 257.
Britanno-Celtic coins, 156.
British bivalves and gasteropods, 285.
British princes, coins of, 151.
British shells of common occurrence, 285, 321.
Buceridæ, habits of, 226.
Buceros birostris, galeritus, and Tickelli, 230.
Buckwheat, blossoms of, 49.
Bulb of common houseleek figured, 60.
Bulimus obscurus, figured, 325.
Burder's comet described, 141.

Cabinets: gold and silver plate marks, 68; coins of early British princes, 151; on mounting insects entire, 281; British bivalves and gasteropods, 285, 321; primitive weapons and works of art, 289; fossil fungi, 318.
Cæsium and rubidium, how discovered, 295.
Camboricum, coin of, 155.
Cambridge, geology of, 200.
Camelodanum, an ancient British capital, 154.
Cancer pagurus, plentifulness of, 182.
Candles, when first used, 40.
Canthocamptus minutens figured, 53.
Capsules and poison-thread of Hydræ, 53.
Caractacus, presumed coin of, 153.
Caradoc sandstone quarries, 192.
Carbon, amount consumed during sleep, 98.
Carbon, various forms of, 243.
Carcinus mænas, plentifulness of, 182.
Carex stricta, or hog-sedge, 337.
Carmine secretion of Dicdon, 272.
Carrion-eating birds, uses of, 195.
Caryota sobolifera, 180.
Case-forming animalcules, 46,
Catkins, structure of, 49.
Cattivelanus, coin of, 155.
Cayenne, climate of, soil of, 299.
Cayman or alligator of America, 300.
Celtic period of history, 289.
Cell-contents, rotation of, 13.
Cells in the garden pea, 133.
Cells in nest of ground wasp, 70.
Cells of vegetable stems, 209.
Cellularia ciliata found at Southend, 181.
Cephalic ganglion of Dytiscus marginalis, 87.
Cephalopodous molluscs, peculiar to the chalk, 202.
Ceramium rubrum, various colours of, 170.
Cerebral distinctions of man and gorilla, 108.
Certain habits of the hornbills, 236.
Cetacea, first occurrence of, in the chalk, 200.
Chalk pits of Grays, Essex, 33.
Chance's patent pressed lens, 43.
Chemical changes in galvanic battery, 22.
Chemical action essential to the production of light, 41.
Chemistry: artificial light applied to photography, 40; labours of the sunbeams, 56; desiccated milk, 92; staining glass red, 104; boiling point of different liquids, 140; liquid glass, 140; crystallization, 173; the gases, 231; allotropism, 242; effects of heat, 248; rock oil, 284; animal life, 303; dyeing, 313; vital dynamics, 339.
Chemistry of the gases, 231.
Chemistry of animal life, 303.
Cheniendopora fungiformis, the cup-shaped sponge, 200.
Chert, prevalence of in greensand, 197.
Chlorophyll, motions of, in cells, 13.
Chloride of zinc, to make, 20.
Chondrus crispus, an iridescent sea-weed, 169.
Chydorus sphæricus, an Entomostraca, 53.
Circulation of blood reduced by sleep, 97.
Circulation of the sap in Vallisneria, 13.
Cities, related to the strata on which they are built, 37.
Civilization, a result of the use of coal, 59.
Classic fables, the hydra, 3.
Clavaria on club of Hercules, 317.
Clip for microscopic observations, 67.
Cloud colour, a study for the painter, 19.
Club mosses, notes on, 101.
Cluphea pilchardus, harengus, and Leachii, 273.
Cluphea sprattus, history of, 271.
Coal-fields, first view of, at night, 214.
Coal, production of dyes from, 315.
Coal, stored up sunlight, 59.
Coccinella, an enemy of Aphides, 65.
"Coccoliths," origin of, 103.
Coil machine, Ruhmkorff's, described, 202.
Coinage, statistics of gold, 235.
Coins of Cymbeline and other British princes, 151.
Coins: coins of early British princes, 151; gold coinage of Britain, production of and value, 234.
Coins, production of gold, 235.
Colony of wasps, history of, 73.
Colours, art of dyeing permanent, 313.
Colour, attractiveness of, 15.
Colour-top, experiments on the, 138.
Combustion a vital process, 56.
Combustion, an analogue of life, 306.
Combustion, degrees of, 42.
Combustion, how insured in lime light, 43.
Combustible substances described, 42.
Comet of June and July, 1861, 141.
Comments on mummy of pigeon, 25.
Complementary colours, example of, 32.
Complementary colours, experiments in, 167.
Concavity of the sphere considered, 113.
Concentric patterns for colour-top, 138.
Conchology: rare shells, 67; British bivalves and gasteropods, 285; British shells of common occurrence, 321.
Cones of firs are seed-vessels, 51.
Consentaneous vibrations of light, 159.
Constituents of milk, 93.
Conus cedo nulli, value of, 67.
Conversion of force in the prism, 15.
Convolutions of shell of garden snail, 250.
Coralline zone of sea-weeds, 169.
Corda's researches on hydræ, 6.
Corms and bulbs, 89—92.
Cotton trees of Jamaica, 193.
Cranial capacity of the gorilla, 107.
Cretaceous deposits, lower divisions of, 197.
Crocodile, notes on American, 300.
Crocus, root of, figured, 90.
"Cropping out," meaning of, in geology, 38.
Cross and Weekes', experiments of, on generation, 222.
Crusaders, remains of, 175.
Cruz, St., collections of bones at, 26.
Crystalline forms of bodies, 244.
Crystalline form of the earth's crust, 173.
Crystallizations for the microscope, 173.
Crystals of snow, described and figured, 318.
Crystals, to prepare for microscope, 173.
Cuckoo and its eggs, 67.
Cube, forms it contains, 264.
Culm of grass, figured, 89.
Culture of the lace-leaf plant, 62.
Culture of Vallisneria, 11.
Cunobelin, coins of, 151.
Cup sponges of the greensand formation, 200, 201.
Current, electric, simple mode of inducing, 202.
Cuticle of plant, cells of, 206.
Cyclas, British species of, 285.
Cyclas rivicola, figured and described, 286.
Cycles of human life, 95.
Cycloum papillosum, fig, 127.
Cydippe pomiformis, capture of, 181.
Cymbeline, coins of, 151.
Cytoseira ericoides, iridescence of, 169.

Dannovellaunos, coin of, 155.
Daniell's constant battery, 22.
Darwin's Loves of the Plants quoted, 10.
Darwinian hypothesis reviewed, 221.
Decomposition, an act of vital force, 57.
Decomposition of light, 159.
Decomposition of light, a misnomer, 15.
Decrease of light by reflection, 17.
Deep sea life, 102.
Demerara, alligators of, 299.
Depredations of garden snail, 253.
Descending order of sedimentary rocks, 257.
Desiccated milk, 92.
Desmarestiæ, rapid decay of, 169.
Diamorphism of Lyngbiæ, 176.
Diatoms plentiful in mud, 246.
Dicotyledonous stems, structure of, 209.
Diffusion of light in the atmosphere, 15.
Digestion, process of, in man, 306.
Digestive apparatus of melicerta, 46.
Digestive system of Dytiscus marginalis, 86.
Digestive system of Hydra viridis, 5.
Diluvium, flint implements of, 292.
Diodon, or globe fish, described, 272.
Dipolarization of light, 166.

Discovery advanced by trifling incidents, 204.
Diseases of parrots, 83.
Dissections of Hydra viridis, 5
Distance, how measured by vision, 111.
Distant sources of water springs, 39.
Donati's comet, note on, 143.
Doris, spawn of, 132.
Douglas pine, height of, 138.
Dracæna polymorpha figured, 286.
Dredging, products of, at Southend, 180.
Du Chaillu's explorations, 105.
Durobrivæ, coin of, 155.
Dyeing, art of, 313.
Dytiscus marginalis described, 83.

Earth, passage through tail of comet, 144.
Edible snails, 254.
Eggs, how many does the cuckoo lay, 67.
Elder pith, cells of, 210.
Electric light attractive to insects, 248.
Electric light in photography, 44.
Electric light, uses of, 42.
Electricity: galvanic batteries and how to make them, 20; electro-motive engine, 104; telegraphic alarum, 282; Ruhmkorff's coil machine, 202; Smee's battery, 346.
Electricity, the missing link in the chain of life, 344.
Electro-motive engine, 104.
Elementary constitution of organic tissues, 303.
Elements of comet of July, 1861, 149.
Elephant beds at Grays, Essex, 40.
Elephants, how trained to dance, 252.
Ellis, discoveries of, in Madagascar, 61.
Elm, aphis of, 66.
Endogenous plants, how constituted, 89.
Engine, electro-motive, 104.
Engraulis encrasicolus, the anchovy, 273.
Entomology: wasps, 69, 212, 320; Dytiscus marginalis, 83; insect trap, 248; mounting insects entire for the microscope, 281.
Enquiry, source of pleasure in, 2.
Epaticus, coin of, 153.
Equipment for geological rambles, 187.
Eriosma lanigera described, 66.
Eriodendron sufructuosum, 196.
Eschmanuzar, sarcophagus of, 175.
Eucampiæ, among surface life, 184.
Euphorbia, botany of, 48.
Excursions: chalk pits of Grays, Essex, 331; Lyme Regis, 127; geological rambles in Montgomery, 185; the rocks of Sunderland and Marsden Bay, 213; naturalists' field clubs, 256.
Exogenous and endogenous plants, 61.
Experimental study of the wasp, 74.
Experiments in polarization of light, 165.
Explorations in Equatorial Africa, 105.
Explosive compounds of hydrogen, 233.
Exposure of plate under lime light, 43.
Exuvation of the horn of Buceridæ, 227.
Eye-piece of home-made microscope, 121.

Farinaceous pith of caryota urens, 178.
Farringdon, Berks, geology of, 200.
Fast colours, how produced, 313.
Fat, how absorbed in digestion, 309.
Fauna suecica of Linnæus cited, 274.
Feathers of butterfly wings, 67.
Fecundity of garden snail, 251.
Fecundity of ground wasp, 72.
Fecundity of plant lice, 66.
Fecundity of the sprat, 275.
Fibre, how used by the wasp, 71.
Field clubs, work and study for, 256.
Filmy ferns, leaf-structure of, 31.
Finding microscope, 103.
First view of the circulation of the sap, 12.
Fishes common in winter described, 271.
Fishes, fall of, from the sky, 328.
Fission of Trachelius ovum, 279.
Flame, resemblance of life to, 56.
Flexible limestone at Marsden Bay, 216.
Flint implements of the drift, 280.
Flints, layers of, in chalk, 36.
Flowers of benzoin for the microscope, 174.
Flustra foliacea, a shore product, 182.
Flowers of Ouvirandra fenestralis, 62.
Food, conversion of, into organic fabrics, 303.
Foot-suckers of Dytiscus marginalis, 86.
Foraminifera of the chalk, 35.
Foraminiferous shells from deep sea, 102.
Force as exemplified in animal economy, 340.
Force, forms of, in the workings of nature, 57.
Forces requisite to the production of vegetation, 58.
Forms contained within the cube, 264.
Fossil collecting, how to set out, 186.
Fossil fungi, list of, 317.
Fossils of the chalk at Grays, Essex, 35.
Fresh-water polyps, 52.
Friction the cause of the sensation of light, 10.
Frog-bit, allied to Vallisneria, 9.
Frogs buried in stone, 176.
Frogs falling from the sky, 328.
Frond of wine palm figured, 177.
Fructification of plants, 9.
Fucus canaliculatus, exclusiveness of habitat, 170.
Fungi of the past autumn, 317.
Funiculus of polyzoon, 131.
Furnace, first sight of, and consequences, 116.

Galvanic battery, Smee's, 346.
Galvanic batteries, to construct, 20.
Galvanometer, experiments with, 204.
Ganglions of Dytiscus marginalis, 85.
Garden snail, history of, 249.
Garden snail, notes on, 320.
Gardens, alleged depredations of wasps, 70.
Gas illumination, effects of, 41.
Gases, chemistry of, 231.
Gasteropodous mollusca, 285.
Gaulish coinage, compared with British, 152.
Gault, of Cambridge, described, 200.
Gault, position of, in regard to other rocks, 197.
Gemmæ of ferns, 31.
Gemmation of Hydra viridis, 5.
Generation, spontaneous, 220.
Geological rambles, Montgomeryshire, 185.
Geologists, suggestions for, 139.
Geology, observations of, by field clubs, 258.
Geology: sections of Diatomaceous shells, 32; chalk pits of Grays, Essex, 33; suggestion to geologists, 139; earthquake at Mendoza, 176; geological rambles in Montgomery, 185; the greensand, 197; rocks and caves of Marsden Bay, 213; formation of artificial sandstones, 248; rock oil and the coal strata, 284; fossil fungi from the tertiary of Silesia, 318.
Geometry of crystals, 173, 242; forms contained within the cube, 264.
Germs of life universally distributed, 223.
Glass, to prepare liquid, 140.
Globe fish, or Diodon, described, 272.
Glumaceæ, characteristics of, 337.
Glyptocrinus, a beautiful encrinite, 192.
Gold, from crucible to coining-press, 234.
Golden chain of physical forces, 56.
Goldschmidt, Hermann, life of, 32.
Gooseberry, section of wood of, 210.
Gorilla, comparative anatomy of, 105.
Grant on Species reviewed, 219.
Grass, hollow stem of, 89.
Grasses, characters of, 337.
Gray, Dr. Asa, on generation, 224.
Gray parrot, management of, 76.
Grays, Essex, chalk pits at, 33.
Great comet of July, 1861, 141.
Green peas under the microscope, 132.
Greensand, distribution of, in England, 197.
Grove's galvanic battery, 24.
Guianas, residence in, 300.
Gun cotton, spontaneous combustion of, 248.

Hairs of plants, cellular structure of, 293.

Hammer for geological purposes, 187.
Hampstead ponds, organic life of, 276.
Handiworks of primitive races of mankind, 292.
Hanno, voyage of, cited, 106.
Hearing with two ears, experiments on, 283.
Heat, effects of, long continued, 248.
Heat, how produced in animal life, 306.
Heat, its uses in the animal economy, 339.
Hedgehog and lapwing, habits of, 68.
Hedgehog, notes on, 284.
Helix hortensis, history of, 259.
Helix pomatia, the edible snail, 254.
Hemerobius perla, the lace-winged fly, 66.
Hemiptera, an order of aphides, 65.
Herb Paris, involucre of, 270
Hercules, labours of, 3.
Hermit crab, Cancer pagurus, 182.
Herrings, importance of, in British fishery, 273.
Holman Hunt, his atmospheric painting, 113.
Homologies of ornithology, 28.
Honeycombed limestone, examples of, 216.
Horizon, apparent diameter of sun at, 110.
Horizontal position during sleep, 97.
Hornbills, on their habits and history, 226.
House leek, bulb of, 90.
Hunting grounds for the microscopist, 173.
Huxley on reproduction of aphides, 66.
Hybernation of garden snail, 254.
Hydra fusca, history of, 6.
Hydræ, ancient and modern, 3.
Hydra viridis described, 3.
Hydra vulgaris attenuata and viridis, 52.
Hydrogen gas, illuminating power of, 42.
Hydrogen gas, to prepare, 231.
Hymenophyllum, microscopic notes on, 31.
Hyperborean snow, 318.

Ice and snow, mechanical distinctions, 244.
Ice, production of crystals in, by heat, 319.
Idols, primitive, in flint, 290.
Illumination for a polarized light, 162.
Imitative faculty of parrots, 80.
Incident rays of light, 16.
Incubation of the hornbill, 228.
Induced currents of electricity, 204.
Infidel tendencies of the Darwinian hypothesis, 225.
Inflammability of hydrogen gas, 233.
Inflorescence of Caryota urens, 178.
Infusoriæ, distribution of, 32.
Ingots of gold, how prepared, 236.
Insects common in July, 138.
Insects, to mount, entire for microscope, 281.
Insect traps, the electric light, 248.
Interference, law of stated, 160.

Jack the Blaster, scene of his exploits, 217.
Jaggery, the sugar of the wine palm, 179.
Jamaica, vultures and cotton trees of, 193.
"John Crow," the vulture of Jamaica, 194.

Kaltenbach's Der Pflazenlause referred to, 65.
Kentish rag, a product of the greensand, 198.
Kerona polyporum, 53.
"King" shell of Conus cedo nulli, 67.
Kiwi and lapwing, habits of, 174.
Knives from the Diluvium, figured, 292.
Knot grass, blossom of, 48.
Knowledge gained by humble means, 294.
Knowledge not bounded by individual ideas, 1.
Korwé, or red-billed hornbill, 229.
Kuchilla-ksi, a name of the hornbill, 228.
Kymbelin, coins of, 151.

Labour of the sunbeams, 56.
Lace-leaf plant of Madagascar, 60.
Laminarian zone of sea-weeds, 169.
Laomedea geniculata described, 130.
Laomedea plentiful in tide pools, 180.
Lapwing and hedgehog, habits of, 68.
Lapwing and kiwi, habits of, 174.
Lapwing, habits of, 104.
Layers of wood, how deposited in endogens, 211.
Leaf of Ouvirandra fenestralis, 62.
Leaves of plants, forms of, 269.
Lemna and Melicerta ringens, 45.
Lenses for a home-made microscope, 122.
Lenton, mulluscs found at, 285.
Lemna minor with hydræ, 4.
Lepisma saccharina wing, scales of, 67.
Life, how sustained chemically, 304.
Life, its hidden source and power, 339.
Life the result of organization, 95.
Light analyzed, 294.
Light and colour not distinct, 17.
Light, polarization of, 157.
Light produced by electricity, 208.
Light, sources of artificial, 40.
Light, studies of, 14.
Light will not magnetize, 176.
Limex agrestis, arborum, etc., figured and described, 321.
Lime light, uses of in photography, 42.
Limestone, snails peculiar to, 285.
Limnia annulatus, note on, 173.
Limnias ceratophyllii, notes on, 172.
Limnocharis Humboldtii, 9.
Liquid glass, to prepare, 140.
Littoral zone of sea-weeds, 169.
Llanymynach Hill, view from, 189.
"Lobster bed" of Atherfield, 199.
Locomotion of the hydra, 4.
London basin, model of, 38.
London basin, outer edge of, 33.
London, growth of, the result of its geological position, 33.
London naturalist's holiday, 180.
Longevity of garden snail, 254.
Lot's wife a rock at Marsden, 216.
Loves of the plants quoted, 10.
Lower Silurian, trap rocks in, 190.
Lunar theory of weather, 283.
Lungs, action of, in respiration, 312.
Lustre, Dove's theory of, 176.
Lycæna argus, wing scales of, 67.
Lycopodiums, microscopic studies of, 102.
Lyme Regis, marine fauna of, 128.
Lyra media, a rare brachiopod, 201.

Madder, use of, in dyeing, 314.
Magnesian limestone at Marsden Bay, 215.
Magnet for galvanic battery, 21.
Magnetic needle influenced by voltaic current, 203.
Malacopterygious fishes, 273.
Malacozoa, name for certain molluscs, 285.
Mammalian, remains of the Purbeck, 201.
Man, antedated in the course of time, 59.
Man contrasted with the gorilla, 107.
Man, remains of early civilization, 290.
Mandibles of Dytiscus marginalis, 87.
Maps issued by Geological Society, 187.
Marine algæ, notes on, 170.
Marsden Bay, rocks and caves, 213.
Marvels of pond life reviewed, 276.
Mausolea of animals, 26.
Mauve and magenta dyes, nature of, 315.
Meadow orchis figured, 268.
Mechanical motions the result of converted force, 57.
Mechanical states of matter, various, 57.
Mediterranean, pholades of, 103.
Medusæ, capture of, 181.
Meiford, Montgomery, geology of, 191.
Melagopoid stage in transformation of crab, 184.
Melicerta ringens, 45.
Membranous structure of Hydra fusca, 8.
Mendoza, earthquakes at, 176.
Mental influences or impressions of phenomena, 117.
Mercury seen by naked eye, 24.
Mercury, transit of, 312.
Metallic lustres, how caused, 17.
Metallurgy: gold and silver marks, 68; theory of lustre 176; gold from the crucible to the coin press, 234; relation of metals to the spectrum, 294.

Metals determined by spectral colours, 295.
Meteorological charts, 176.
METEOROLOGICAL OBSERVATIONS: 1861—April, 31; May, 64; June, 99; July, 137; August, 172; September, 209; October, 246; November, 281; December, 316. 1862—January, 349.
METEOROLOGY: Aurora of March 9, 1861, 63, 104; influence of trees on temperature, 140; meteorological charts, 176; lunar theory of the weather, 283.
Meteors, Secchi's theory of, 248.
Micrometers produced by photography, 176.
MICROSCOPE: ancient and modern Hydræ, 3; Vallisneria spiralis, 9; Melicerta ringens, 45; fresh-water polypi, 52; Aphides, 65; spring clip, 67; water beetle, 83; Anagallis pratensis, 100; Finding microscope, 103; construction of amateurs' microscope, 121; polarization of light, 157; marvels of pond life, 137, 276; mounting insects entire, 281; Wenham's binocular, 298.
Microscope, finding, described, 103.
MICROSCOPIC OBSERVER: Hymenophyllum, 31; Infusoria, 32; sections of Diatomaceous shells, 33; out-door studies, 32, 66, 138, 210; Aphides, 65; Anagallis pratensis, 100; club mosses, 101; pond gatherings, 137, 276; insects to be found in July, 138; Rotatoria, 172; crystals, 173; vegetable anatomy, 209; growth of trees, 210; diatoms found in mud, 246; snow-stars, 318; fossil fungi, and fungi found in 1861, 317.
Milk, process of desiccating, 92.
Mineral character of cretaceous system, 199.
Minerals, effects of heat on, 248.
Mint, operations at, described, 235.
Minute life of the sea, 127.
Monad, origination of, *ab ovo*, 223.
Montgomery, geology of, 185.
Motion an expenditure of force, 57.
Moule's light for photography, 44.
Mountain limestone, scenery of, 189.
Mud, organic constituents of, 246.
Mullus surmuletus, a summer fish, 271.
Muscular power of Hydra viridis, 5.
Muscular structure of birds, 28.
Musical notes by electricity, 207.
Mutual relations of all things, 59.
Mysteries of the Mint explained, 241.

NAPIER'S machine for weighing coins, 238.
NATURAL HISTORY OBSERVATIONS: Habits of lapwing and hedge-hog, 68, 104; deep sea life, 102; pond gatherings, 138; rotatorum, 172; kiwi and lapwing, 172; they stamp with their feet, 174; can serpents poison each other, 175; habits of wasps, 212; attraction of insects by electric light, 248; habits of wasp, 320. See also MICROSCOPIC OBSERVER.
NATURAL HISTORY AND ZOOLOGY: Hydræ, 3, 52; mummy of pigeons, 25; Melicerta ringens, 45; cuckoo and its eggs, 67; wasps, 69; grey parrot, 76; Dytiscus marginalis, 83; the gorilla, 105; minute life of sea, 127; London naturalists' holiday, 180; the vultures of Jamaica, 193; origin of species, 219; habits of the hornbills, 226; garden snail, 240, 320; naturalists' field clubs, 256; the sprat and other products of British fishery, 271; pond life, 276; British bivalves and gasteropods, 285, 321; alligators of Demerara, 299; fall of frogs, toads, and fishes from the sky, 328.
Naturalists' field clubs, use of, 256.
Naturalists' holiday, 180.
Naviculæ hippocampi figured, 247.
Neocomian, series of greensand, 199.
Neritina fluviatilis, a British shell, 278.
Nervous system of Dytiscus marginalis, 85.
Nest of vespa vulgaris, 70.
Nitophyllum laceratum, an iridescent sea weed, 169.
Nitre, natural production of, 174.
Nitrogenous substances as food, 305.
Nobert's test plate, 51.
Noctiluca rivularis, a cause of phosphorescence, 184.
Notommata Werneckii, where to find, 173.
Nucleus of cell, to observe, 14.
Nutriment, how obtained by the animal fabric, 304.

OBJECTS for exhibiting polarized light, 168.
Object-glass of home-made microscope, 121.
Octahedron, properties of, 266.
Offa's dyke, course of, 189.
Offing, artificial, use of, 114.
Old Poll, notes on the gray parrot, 76.
Onion, vascular structure of the skin, 210.
Ophiocomæ, a product of deep dredging, 102.
Ophiocome neglecta, 19.
Orbit of comet, figured, 150.
Orchis mascula, 271.
Orchis, root of bird nest, 92.
Organic chemistry, occult laws of, 330.
Organic tissues, constitution of, 303.
Organic remains of greensand, 199.
Origin of species considered, 319.
Orthagoriscus oblongus, or sun-fish, 273.
Orthis expansa of Caradoc limestone, 192.
Osseous structure of birds, 28.
Out-door studies for the microscope, 32.
Ouvirandra bernieriana, 62.
Ouvirandra fenestralis, lace leaf plant, 60.
Ova of the garden snail, 250.
Oxidation of zinc by decomposition of water, 232.
Oxycalcium light in photography, 43.
Oxygen absorbed in preparation of dyes, 314.
Oxygenation of blood, how performed, 311.
Ozone, forms of, 243.

PALÆOZOIC rocks, relations of, 217.
Paley's natural theology cited, 10.
Palmellaceæ, a form of lyngbia, 176.
Palms flowered at Kew, 177.
Palm wine, a product of Caryota urens, 178.
Paludina vivipara, shells of, 287.
Paramœcium aurelia described, 138.
Paraffin oil, test for, 248.
Parenchyma absent in ouvirandra, 61.
Paris Observatory, temperature of the vaults, 223.
Parrots, how to teach them, 79.
Pasteur's experiments on generation, 222.
Path of the comet of July, 1861, 148.
Pea-pod, study of, under microscope, 133.
Pear, section of wood of, 200.
Pellitory, elastic stamen of, 50.
Pentacrinites, or stone lilies, 128.
Pepsin, a transition form of food, 307.
Perianth, its parts and structure, 269.
Permian group of rocks, 217.
Persistent vision, instance of, 116.
Perspective considered in reference to the apparent diameter of the sun, 111.
Petaloid division of plants, 271.
Peter Allen, his excavations at Marsden, 216.
Petroleum barometer, 302.
Phœniciam antiquities, 175.
Phosphate of zinc obtained from greensand, 198.
Phoxichilus spinosus, 182.
Physa fontinalis, the fountain snail, 326.
Physical inquiries mutually related, 1.
Physical sciences, attractions of, 305.
PHYSICS: light, 14; labour of the sunbeams, 56; polarization of light, 157; theory of lustre, 176; effects of heat, 248; allotropism, 242; force as related to life, 340; light analyzed, 294.
Physiological argument and Darwinism, 221.
Physiological test of apparent diameter of the sun, 110.
PHYSIOLOGY: Why do we lie down to sleep? 95; physiology applied in the solution of an astronomical phenomenon, 110; growth of the horn of the hornbill, 226; chemistry of animal life, 303; vital dynamics, 339.
Pigeon, mummy of, described, 25.
Pimpernel, a microscopic study, 100.
Planets, notes on new, 68.
Planets, notices of new, 284.
Planorbis, species of, in Britain, 326.
Plant cell, morphologies of, 303.
Plant lice, families of, 65.
Plate marks used by Goldsmiths' Company, 68.
Platessa flessus, a common winter fish, 271.

Platonic bodies, what they are, 266.
Plumage of birds, notes on, 27.
Plumatella repens, note on, 278.
Poison of serpents, action of, 175.
Polarisation of light, 157.
Polarizer, how to make one, 162.
Polypothecia plentiful at Warminster, 201.
Polyps, to collect and keep, 52.
Polyzoa, characteristics of, 131.
Pompey's pillar, a rock at Marsden, 216.
Ponchet, experiments of, on generation, 222.
Pond gatherings for microscope, 137.
Pond gathering, search for rotatoria, 173.
Ponds, marvels of, 276.
Porphyra laciniata, an edible sea-weed, 170.
Portable press for impressions of wood blocks, 212.
Portunus puber, the velvet swimming crab, 182.
Powder magazines endangered by telegraph wires, 248.
Powis Castle, scenery of, 191.
Press, model of a portable, 212.
Prevalent theories of spontaneous generation, 219.
Prosenchyma of garden pea, 135.
Protoplasm in cells, 14.
Primary current of electricity defined, 205.
Primitive crystal, nature of, 173.
Primitive weapons and works of art, 289.
Prism of binocular microscope, 208.
Prismatic colours of metals, 295.
Propagation of Hydræ ova and by gemmation, 53.
Psittacus erythrinus described, 78.
Ptyalin, a transition form of food, 306.

Ramphastos compared with Buceridæ, 226.
Raphides in cells of pea, 135.
Rare shells, note on, 67.
Rarefactions of the sunlight, 58.
Rays of light, how polarized, 162.
Reflection of light explained, 158.
Refraction by atmospheric vapours, 111.
Refraction of light considered, 158.
Refractions of light in the atmosphere, 16.
Reparation of the body during sleep, 96.
Reptilia of South America, 300.
Reptilian forms of the cretaceous system, 200.
Respiration exemplified in the plant, 57.
Respiratory system of water beetle, 84.
Retinal images, real and illusory, 117.
Reversability of Hydræ, 53.
Rhinoceros hornbill, casque of, 227.
Rhombic dodecahedron, form of, 267.
Riccia fluitans for growth in tanks, 9.
Rising of sun physiologically considered, 110, 284.
Rock oil and its geological relations, 284.
Rocks and caves of Marsden Bay, 213.
Rocks, order of, in Britain, 260.
Rose, section of wood of, 210.
Rotation of cell-contents, 13.
Rotatoria, abundant production of, 172.
Ruhmkorff's coil machine described, 202.

Saida, excavations at, 175.
Saltpetre, spontaneous production of, 174.
Sandbeds of the London basin, 36.
Sandstone, artificial production of, 248.
Sarcode in the structure of Hydræ, 53.
Scavenger habits of vultures, 194.
Schizogonium, diamorphism of, 176.
Schizonema, frustule of, 247.
Science progresses in detail, 1.
Sea, minute life of, 127.
Seashore Studies: deep sea life, 102; minute life of sea, 127; dredging at Southend, 180; rocks of Marsden, 213; products of the winter fishery, 271.
Sea stores, desiccated milk for, 93.
Sea-weeds, notes on, 169.
Second causes lead to a first cause, 2.
Sections of diatomaceous shells, 32.
Section of London basin, 39.
Sedges, structure and growth of, 337.
Seedling form of Caryota urens, 179.
Seeing round a corner, 158.
Selaginellas, studies of, 102.
Selenite, use of, in polarization, 167.
Self-division of animalcules, 277.
Sensation of light, cause of, 15.
Senses, erroneous deductions from, 110.
Senses of the garden snail, 252.
Serpents, can they poison each other, 175.
Sertularia, plentiful in tide pools, 180.
Serum, or whey of milk, 93.
Sexes, distinctions of in Vespa vulgaris, 69.
Sexual forms of Vallisneria, 10.
Shooting stars, Secchi's theory of, 248.
Showers of frogs, toads, and fishes, 328.
Sight and smell of vulture, 195.
Single cell battery, use of, 203.
Siphonia pyriformis, fossil forms of, 200.
Skeleton plant, Ouvirandra fenestralis, 61.
Slack, on Pond Life, reviewed, 277.
Sleep, why do we lie down, 95.
Slug, internal shells of, 321.
Smee's galvanic battery, 346.
Smell, acute sense of, in garden snail, 252.
Smelt, quantity of, in winter, 275.
Snail, history of, 249.
Snails in harness, 252.
Snowdrop, botanical structure of, 269.
Snow stars described, 318.
Sodium, coloured flame of, 295.
Solar atmosphere, what is it? 18.
Solar light, refractions of, 16.
Soldering, how to perform, 20.
Solid bodies contained in the cube, 264.
Sources of water-supply for London, 35.
Southend, sea-shore life at, 181.
Sovereigns, rapid minting of, 238.
Spar of Douglas pine at Kew, 138.
Sphericity of the sky considered, 112.
Sprat, natural history of, 271.
Spring clip for microscope, 67.
Spurge, blossoms of fruit of, 48.
Squid, Loligo vulgaris, pigment of, 182.
Stained glass, 104.
Stamping power of kiwi and lapwing, 175.
Stand for microscope, to construct, 124.
Starch, uses of, in animal economy, 305.
Stars covered by aurora of March 9, 1861, 63.
Starwort, stameniferous blossoms of, 49.
Stems of plants, various kinds of, 88.
Stephenson, anecdote of, 58.
Stereoscopic views of microscopic objects, 208.
Stinging organs of the Hydræ, 53.
Strychnos eaten by the hornbill, 228.
Stylonichia pustulata, 247.
Submarine fauna, 102.
Suggestions for geologists, 139.
Sulphur, various forms of, 243.
Sun, apparent size of on horizon considered, 110.
Sun rising and setting physiologically considered, 320.
Sunbeams, labour of, 56.
Sunderland, rocks and caves at, 213.
Sunfish, occasional on British coast, 273.
Sunlight, three powers of, 57.
Sunlight, value in foot-pounds, 58.
Sunset, theory of its appearances, 117.
Survey, geological, maps of, 188.
Syrphus an enemy of aphis, 65.
Symbols in flint of early races, 292.

Tail of comet, passage of earth through, 144.
Talking birds, the gray parrot, 76.
Tantalus, a symbol of knowledge, 1.
Tardigrada, movements of, 278.
Tasciovani, coins of, 151.
Teeth of common garden snail, 251.
Telegraphic alarum, 282.
Telegraph cables, submarine, 103.
Temperature, influence of trees on, 140.
Tentacles of Hydræ and Actiniæ, 54.
Tentaculæ of Hydræ, 4.

Terebratulæ, characteristic of greensand, 200.
Testaceous molluscs, habits of, 254.
Testing machine for gold coins, 238.
Tetrahedron, properties of, 264.
Tetraneura ulmi, a species of aphis, 66.
Thames valley, adapted for a great city, 33.
Theory of apparent diameters of sun and moon, 117.
Theory of lustre, Dove's, 176.
Time measured by burning candles, 61.
Time, measure of, in geological phenomena, 258.
Tincomus, coin of, 154.
Tinea, a destroyer of animal fabrics, 26.
Toads, fall of from the sky, 328.
Toddy palm, Caryota urens, described, 177.
Togodumnus, coin of, 155.
Toucan, acute sense of smell, 227.
Tourmaline, use for polarization, 165.
Trachelium ovum described, 277.
Traditional ages of human history, 290.
Transformation of the crab figured, 183.
Transmutations of form in bodies, 244.
Trawl, use of, in marine collecting, 182.
Tree wasp, nest of, figured, 69.
Trees, growth of, how it takes place, 211.
Trees, influence of, on temperature, 140.
Trichodina pediculus, 53.
Trilobite dingle at Welshpool, 190.
Trinucleus concentricus, specimens of, 190.
Tripoli slate, organic remains of, 248.
Troglodytes Gorilla, notes on, 105.
Tropical forests, phenomena of, 301.
Tropiopoda lamellibranchiata, 285.
Tubifex rivulorum, 246.
Tulip, botanical structure of, 269.
Tyne-bar, scenery of, 214.

Ulacodiscus figured, 247.
Unio tumidus, figured and described, 286.
Uses of carrion-eating birds, 195.
Uses of light, heat, and actinism, 18.
Uses of the wine-palm, 179.

Vallisneria spiralis, history of, 9.
Valvata piscinalis, a British shell, 288.
Vascular system of plants illustrated, 209.
"Vault of heaven," source of the idea, 118.
Vegetable anatomy, studies of, 209.
Vegetation of the chalk, 36.
Vibratory theory of light, 14.
Vibrio paxilifer, rythmical movements of, 183.
Viper, can resist its own poison, 175.
Virchow's dogma on generation, 224.
Vision, illusory, in regard to diameter of sun, 110.
Vision of the garden snail, 251.
Vital dynamics, 339.
Vital energies, how sustained, 56.
Vital purposes of sleep, 95.
Vitreous forms of bodies, 244.
Vitrina pellucida, figured and described, 322.
Vivarium, suggestions of its philosophy, 56.
Volition, a distinction between animals and vegetable, 93.
Vultures and cotton-trees of Jamaica, 193.

Warminster, Warwick, geology of, 201.
Wasps, habits of, considered, 212.
Wasps, history of Vespa vulgaris, 69.
Water-bears described, 276.
Water beetle, history of, 83.
Watercresses on a chalk-bed, 35.
Water, peculiar aspects at Grays, 35.
Water veins in chalk strata, 33.
Waves of light, direction of, 162.
Wax, when first used for purposes of illumination, 37.
Way's, Prof., improved electrodes, 44.
Wealden, surrounded by greensand, 198.
Weather, lunar theory of, 283.
Wenham's binocular microscope, 298.
White-capped cycle-shell, 286.
White sedge, root of, 91.
Whiting, manufacture of, 35.
Whorls of garden snail illustrated, 249.
Why do we lie down to sleep? 95.
Wine palm described, 177.
Wing of pigeon described, 27.
Wingless forms of aphides, 66.
Wings of bird, structure of, 27.
Winter fishery, products of, 271.
Wood, microscopic sections of, 209.
Wooden instruments found in turf bogs, 291.
Woodwardian Museum, Cambridge, 201.
Woodrush, growth of, 335.

Yam of Madagascar, Ouvirandra fenestralis, 61.

Zoea pelagica, the young of the crab, 183.
Zones of marine algæ, 169.
Zonites, British species of, 322.
Zoophyte troughs, use of, 129.
Zua lubrica, or varnished shell, 325.

END OF THE THIRD VOLUME.

LONDON:
T. HARRILD, PRINTER, SHOE LANE,
FLEET STREET.
